Note: Items Hand I are optional. Completing these items will assist EPA and State and local governments in locating and assessing hazardous waste sites. Although completing the items is not required, you are encouraged to do so.

## Sketch Map of Site Location: (Optional)

Sketch a map showing streets, highways, routes or other prominent landmarks near the site. Place an X on the map to indicate the site location. Draw an arrow showing the direction north. You may substitute a publishing map showing the site location.

## Description of Site: (Optional)

Describe the history and present conditions of the site. Give directions to the site and describe any nearby wells, springs, lakes, or housing. Include such information as how waste was disposed and where the waste came from. Provide any other information or comments which may help describe the site conditions.

The Pasco Landfill is approximately 3 miles NE of Pasco Wa.

There is a well on the site, and approximately nine irrigation wells within a one mile radius.

From 1955 to 1971, the site was an open-burn dump handling only residential & light industrial waste.

In 1971, the operation was changed to a sanitary landfill.

Resource Recovery Corp., a Seattle based firm assumed management of the site in 1972. It was during the period from '72 to '74 that the site accepted industrial wastes under a waste discharge permit (zero discharge) issued by the Wa. St. Dept. of Ecology. Continued on other page.

## Signature and Title:

The person or authorized representative (such as plant managers, superintendents, trustees or attorneys) of persons required to notify must sign the form and provide a mailing address (if different than address in Item A). For other persons providing notification, the signature is optional. Check the boxes which best describe the relationship to the site of the person required to notify. If you are not required to notify check "Other".

I Description of Site: Continued

The industrial wastes were buried in an area separated from the landfill operation.

The drums were stacked in rows and covered with a layer of soil. Then poly-sheeting was placed upon the soil, and approximately two feet of final cover was added atop the poly-sheeting.

The liquids were put in ponds, allowed to evaporate and then buried in the same manner as above.
